# Navbar & Sidenav

Evasco, Mark Angelo L.

# Navbar

The navbar is fully contained by an HTML5 Nav tag. Inside a recommended container div, there are 2 main parts of the navbar. A logo or brand link, and the navigations links. You can align these links to the left or right.

## Right Aligned Links

To right align your navbar links, just add a right class to your <'ul'> that contains them.

|---|---|

## Left Aligned Links

To left align your navbar links, just add a left class to your <'ul'> that contains them.

|---|---|

## Centering the Logo

The logo will center itself on medium and down screens, but if you want the logo to always be centered, add the center class to your <'a class="brand-logo"'>. You will have to make sure yourself that links do not overlap if you use this.

|---|---|

## Active Items

Add active class to your li tags to denote the current page.

|---|---|

## Extended Navbar with Tabs

To add extended components to the navbar, add the class nav-extended to the outer nav tag. This will allow your navbar height to be variable. Then you can just include a tabs component inside the nav-wrapper.
